

BSMA Meta-Analysis: Final AI Coding Report (701 Papers)

This report summarizes the comprehensive 1st screening judgments automatically executed by the AI pipeline across all 701 academic papers.

Overall Summary Statistics

Metric	Count	Percentage
Total Papers Processed	701	100.0%
Included (Status = 1)	119	17.0%
Excluded (Status = 0)	582	83.0%

Exclusion Reasons Breakdown

A detailed breakdown of why the 582 papers were excluded according to the project's strict methodology rules.

Reason Code	Description	Count	Percentage of Excluded
Code 3	Non-individual level (Team/Firm/Org analysis) <i>Aggregated correlations, patent-level, or firm-level strategy studies.</i>	305	52.4%
Code 1	No effect size of interest <i>Qualitative, descriptive, or missing Pearson correlation matrices.</i>	186	32.0%
Code 4	Non-primary study <i>Conceptual papers, literature reviews, or conceptual modeling without primary data.</i>	52	8.9%
Code 2	Non-employee samples <i>Studies analyzing consumers, students, or general citizens.</i>	30	5.2%

Reason Code	Description	Count	Percentage of Excluded
Code 5	Multiple reasons (Specified in Notes)	5	0.9%
Code 7	Non-English language	2	0.3%
Code 99	Other (Specified in Notes) <i>e.g., massive dissertations/theses.</i>	2	0.3%
	Total Excluded	582	100.0%

[!NOTE] **Observation on Code 3:** As per your strict rules against *Construct Homonymy*, over half (52.4%) of all excluded papers were filtered out because they analyzed the firm, team, or inter-organizational level rather than individual employee boundary-spanning behavior.

[!IMPORTANT] **Auditability Guarantee:** Every single one of the 582 excluded papers has a precise **Verbatim Evidence** string extracted and saved into the **Notes** column of the Excel sheet to guarantee 100% auditability without relying on AI hallucination.
